Feb 10, 2017 - GitLab 

Postmortem of database outage of January 31

Postmortem on the database outage of January 31 2017 with the lessons we learned.

[← Back to company](#)

On January 31st 2017, we experienced a major service outage for one of our products, the online service GitLab.com. The outage was caused by an accidental removal of data from our primary database server.

@solidtubez

Transparency leads to trust

"Thank you for sharing this in such a transparent manner. It is great to see that Foundation takes the responsibility for the cluster very seriously. [...] So while the service went down and that of course is problematic, I actually do trust the service more now, due to this communication."
